

SHASHWAT

Senior Software Developer (SDE-2)

7007032590 • itsmeitself7777@gmail.com • sam-p.netlify.app • github.com/samm-developer • github.com/byte-void/

SUMMARY

Senior Software Developer (Full Stack - MERN, JAVA) with almost **5 years** of professional experience building and delivering **scalable, high-performance web applications** using **React.js, Next.js, Node.js, JAVA, Spring Boot, Redux, AWS and PostgreSQL**. Proven track record of **optimising frontend and backend performance**, reducing load times by up to **40%** and enhancing user experience through efficient state management and API optimisation. Experienced in **architecting robust, fault-tolerant systems** leading projects end-to-end, mentoring developers and integrating **complex payment** and analytics solutions to achieve critical business objectives ensuring reliability and scalability. Extensive experience collaborating with **US, UK, FR and UAE clients** effectively gathering requirements, delivering solutions aligned to business.

WORK EXPERIENCE

Bounteous and Accolite — <https://www.linkedin.com/company/bounteous-accolite/>

India

Senior Software Developer (SDE-2)

12/2025 - Present

- Worked on **British Telecom** project (**React.js, Next.js, JAVA, TypeScript, PostgreSQL, AWS**) architecting, designing and implementing core functionalities for the Security Control Framework, RBAC, secure access management, policy enforcement, security history, audit history and controls.
- Designed and implemented the end-to-end Task Management module enabling task creation, assignment, prioritisation, status tracking, due-date management, comments, **email notifications using Lambda (A) and SES and file attachments using multer on AWS** for secure file uploads.
- Optimised React rendering performance up to **30%** by reducing unnecessary re-renders and calculations using **memoization techniques, efficient state management** using **redux toolkit**, pagination on api for infinite scroll and component-level optimisation identified via React DevTools.
- Improved initial page load time up to **40%** by implementing **code splitting, lazy loading and asset optimisation**, enhancing overall user experience.
- Improved API response times by refactoring **async workflows (Node.js)**, optimising **queries and implementing indexing on frequently accessed column in DB** and eliminating redundant database calls to reduce server latency.
- Implemented caching and efficient resource management (**Redis, in-memory caching**) to handle high traffic, maintaining stability and reliability.
- Designed a scalable frontend-backend system architecture using **Next.js, SSR, SWR, Redis caching and optimised API layers**, enabling high-traffic handling with low latency, improved fault tolerance and future ready modular scalability.
- Mentored 5 junior developers through code reviews and technical guidance while collaborating with **cross-functional teams across different organisation** to deliver business-aligned solutions.

Saksoft (Solveda) — <https://www.linkedin.com/company/saksoft/>

India

Software Developer (SDE-1)

12/2022 - 12/2025

- Worked on **OSLO v4 (React.js, Node.js, Javascript, MongoDB)** and **OSLO v5 (Next.js, Typescript, Node.js, Redis, Redux, PostgreSQL)**.
- Optimised API call in **OSLO v5 using SSR by 40% (next.js)**, cutting load time by **30%** compared to OSLO v4.
- Designed and implemented **micro-frontend** architecture in **menswearhouse** and **tailoredbrands** using modular React applications, enabling independent builds, deployments and better isolation of features enabling faster and scalable frontend.
- Built optimised search suggestion using debouncing, throttling and redux-toolkit in **spencers**, **optimising search latency by 60%** which significantly reduce unnecessary API calls.
- Developed the **Spencer's Rider mobile application using React Native**, implemented **Push Notification**, OTP based authentication, account linking and validation moreover implementing **Google Maps APIs** for real-time destination visualisation and route navigation.
- Built **RiskWrite and IMS from scratch supporting 1M+** users with optimised data workflows for higher traffic usage.
- Built **IFFCO** (Govt e-com) with React, Node, Express, **GraphQL, AWS**; optimised load speed by **30% using code-splitting, PRPL and JS minification**.
- **Implemented GTM and Google Analytics** to track user behaviour, analyse engagement metrics and support data-driven product decisions.
- Integrated **PayU, AmazonPay and JusPay** payment gateways, ensuring secure transactions.
- Optimized **RiskWrite Project by 30%** by upgrading from (React, JavaScript, Node) to (**Next, Node TypeScript, Redis, MUI, Zod**).
- Led development of Redington Gulf E-COM project; implemented role based access and **dynamic delivery algorithms, result in 25% faster deliveries**.
- Integrated **RabbitMQ for decoupled communication across microservices** on order, inventory and delivery service in E-Com project.
- **Mentored 6 junior developers**, code reviews and participated in technical interviews for the organisation.
- Led direct collaboration with enterprise clients across **US, UK, France, UAE** and coordinated with third party platforms such as **SAP, MuleSoft and Unbxid search** to drive requirement alignment, architect scalable integrations and deliver reliable, production grade solutions.

BingePrime — <http://bingeprime.com/>

India

Software Development Intern

05/2022 - 11/2022

- Worked on **movie streaming website** BingePrime (React, Node).
- Implemented **Razorpay payment gateway** for subscription based model.
- Reduced javascript execution time by utilizing **pre-loading, pre-caching and lazy loading of assets**.
- Developed a personalized movie recommendation service using **Python, FastAPI, Pandas, Scikit learn and REST APIs**, leveraging content based filtering and cosine similarity to deliver relevant movie recommendations.

LetsGrowMore — <https://www.linkedin.com/company/letsgrowmore/>

India

Web Developer Intern

09/2021 - 03/2022

- Developed secure authentication and authorization system using **access, refresh tokens and cache** for blocking used tokens after logout in Voter Poll project having **Angular, Java, Spring Boot**.
- Handled authorized routing for subscriber-only routes with **MongoDB aggregation pipelines**.
- Designed various secure login/signup methods including auto login or OAuth login via Google and Facebook.
- Managed **PhonePe Payment gateway** and hosting on AWS.

SKILLS

Frontend Technologies:

React.js • Next.js • Angular • Micro Frontend • Redux • React-Native • Payment-Gateway • SSR • CSR • SWR • Material UI • Tailwind • React Hook • Framer Motion

Backend Technology:

Node.js • Nest.js • JAVA • Python • Micro Services • GraphQL • RabbitMQ • Redis • Express.js • GTM • Google Analytics • SAP • REST API • Caching • Socket.io • Multer

Devops: AWS • EC2 • S3 • Docker • Jenkins • Lambda • SES • Putty • CI/CD

Database: MongoDB • Postgres • MySQL • Query Optimisation • Indexing • Schema Design • ACID

Tools: Elasticsearch • Dynatrace • Citrix • SonarQube • PgAdmin • JIRA • Confluence • ZScaler • VMware • Postman • Git • Swagger • Chrome DevTools • Figma

Exam Qualificatied: GATE CSE • GATE DA

PROJECTS

SmartTicket Assigner (AI + Automation)

<https://github.com/byte-void/Auto-Ticket-Assigning-Agent>

- Designed and developed a **Python based AI micro service using FastAPI, NLP, REST APIs and Postgress to analyse incoming tickets**, extract technologies, required skills and integrate seamlessly with the Node.js backend for intelligent task assignment.
- Developed a **dynamic skill matching engine that identifies the most suitable engineer** based on technical expertise and availability.
- Built an automated ticket routing engine that reduced manual triaging by intelligently assigning tickets using AI driven recommendations.
- Optimised the ticket processing pipeline to support scalable, low-latency analysis and assignment of incoming requests and task instantly.

PriceWise

<https://github.com/samm-developer/PriceWise>

- Designed and developed a cross-platform price comparison application using **Java, Spring Boot, Flutter, REST APIs and MySQL** to aggregate product prices from e-commerce platforms and help users identify the best deals.
- It is a project to solve the problem faced by customer to get the lowest price to compare current price especially in sale season.
- It shows the customer the **lowest price, average price and current price** of any product on Amazon or Flipkart so the customer can **compare prices** easily.

WatchParty

https://github.com/byte-void/watch_party

- Designed and developed a **real-time collaborative video streaming platform** using React.js, Node.js, **Socket.IO, WebSockets** and YouTube **IFrame** Player API, enabling synchronized video playback across multiple users (especially for couples).
- Implemented advanced synchronisation algorithms with timestamp based latency compensation, **achieving sub-second accuracy** for play/pause/seek operations across all connected clients.
- Optimized the real-time communication pipeline using **event-driven architecture** and efficient WebSocket message handling, ensuring low-latency synchronization and a seamless multi-user viewing experience.

Node-Module

- Built my **own lightweight node-module on npm** which is optimized for performance and developer experience.
- Developed and published an open-source Node.js package on npm, providing reusable functionality for React applications with documentation.

Extension Service

- I have created my **own extension** of controlling the speed of any video
- I used it to increase Youtube video speed **beyond 2X** for learning purpose

EDUCATION

BUNDELKHAND INSTITUTE OF ENGINEERING AND TECHNOLOGY, JHANSI

B.Tech (Computer Science and Engineering) | Percentage: 78 / 4yr

KEY ACHIEVEMENTS

★ Smart India Hackathon Winner (2025) and Runner up (2024)

Winner (2025) and Runner up (2024) at Smart India Hackathon by **Govt of India**. Designed a **smart truck routing solution** optimizing routes by goods availability, improving vehicle utilization by **30%**

💡 GFG HackerFest 2nd Rank

EasyED (available on playstore) is the application showed in this contest. Participated and secured 2nd rank in GFG HackerFest. Designed an automatic counselling system by using **react native** technology and send the report to parents at month-end

💎 DSA Problem Solving

Solved 1000+ DSA problems on LeetCode and GFG, strengthened logic building and algorithmic thinking through practice. Developed expertise in time and space complexity optimization, enabling the design of efficient and scalable algorithmic solutions
